## Declaration of Authorship

We, Imran Hossen, Rajesh Chandra Barman, MD. Jakir Hossain, Ishtiaq Ahmed Arnob and Rohan Rashid declare that-

1. This project is titled, "**ATM MACHINE MANAGEMENT SYSTEM**" and the work presented in it is our own.
2. We confirm that: This work was done entirely while in candidature for a B.Sc. Engineering in CSE degree at Bangladesh University of Business and Technology.
3. We own every single part of this Project.

# *Certificate*

This is to certify that the project entitled, "**ATM Machine Management System**" and submitted by Imran Hossen, Rajesh Chandra Barman, MD. Jakir Hossain, Ishtiaq Ahmed Arnob and Rohan Rashid. ID No. 21222203001, 21222203002, 21222203003, 21222203028, 21222203050 in partial fulfillment of embodies and their requirements work under my supervision.

---

Md. Saddam Hossain

Assistant Professor, Department of C.S.E

Bangladesh University of Business and Technology

Date: 10-March-2023

## **Dedication**

Dedicated to our parents for all their love and inspiration. Also we express gratitude and respect from our hearts to our beloved Sir Saddam Hossain. He saw our project. We have discussed what went wrong in the project and what needs to be added.

## **Abstract**

Generally, banking system has been working continuously for many years. Cash or paper money has been the payment mechanism for centuries in nationwide. In traditional banking methods customer will need to interact with the cashier which will be appointed by the bank to handle bank services such as withdraw money cash deposits and reporting loss of ATM cards by customers. At times when a customer should be performing any services on the bank, the process are done over the counter. In modern days, the system banking has changed in a technological way where Automated Teller Machine (ATM) was introduced. The ATM provides many functions as required, but the current method has shown few drawbacks until he loses his ATM debit card. From this point of view customers will need to perform the report through traditional methods which are manually reporting it to the bank which could delay the time taken to perform and reporting it through hotlines where it might face unexpected and scheduled maintenance. To address the current drawbacks as stated, ATM reporting system has been proposed as an alternative method where it only requires customers to report the loss through the ATM machine which in fact could provide the ease of usage to the customers.

ATM Management System is a management system that can be used to manage the ATM Booth Machines. The admin panel has full control over the software and it can be fully customized according to the specific needs of customers' requests and recommendations. Such as- Inquire Balance, Withdraw, Deposit and also Help Menu. That's why it's a universal project to manage the information of ATM Machine.

## **Approval**

This project "ATM Machine Management System" and submitted by Imran Hossen, Rajesh Chandra Barman, MD. Jakir Hossain, Ishtiaq Ahmed Arnob and Rohan Rashid. ID No. 21222203001, 21222203002, 21222203003, 21222203028, 21222203050 Department of Computer Science and Engineering (CSE), Bangladesh University of Business and Technology (BUBT) under the supervision of Md. Saddam Hossain; Lecturer, Department of C.S.E has been accepted as satisfactory for the partial fulfillment of the requirement for the degree of Bachelor of Science (B.Sc. Engg) in Computer Science and Engineering and approved as to its style and contents.

**Topics :**

**Chapter 1: Introduction**

- Project aim & objectives
- Development Environment

**Chapter 2: System analysis**

- General Description
- Software Design
- Implementation
- Flowchart

**Chapter 3: Program Results**

- User Interface

**Chapter 4: Conclusion**

- Future Work & Conclusion

## CHAPTER 1: INTRODUCTION

ATM is designed to perform the most important functions of the bank. By using plastic cards, containing all personal details of the customers and they will only need to enter their pin numbers in order to use the services. ATM is an Electronic Fund Transfer that is capable of handling many functions, until when a person loses his ATM cards. Instead of using the traditional methods which are queuing up the line and by hotline phone call, this could be the possible alternative adding the new feature on the ATM machine, where it could be less time consuming.

### 1.1 Project Aim and Objective

The project aims and objectives that will be achieved after the completion of this project are discussed in this subchapter. The aims and objectives are as follows:

- The main purpose of this proposed idea is mainly focusing on the new feature that can be implemented as a possible alternative to the traditional methods. Based on the traditional methods in banking system, the bank will appoint a person, the teller to assist the customers when the customers need to perform any services in a bank. The customers on the other hand, will need to request for forms and the forms will be submitted to the counter. In order to perform, customers will need to queue up the line while waiting for their turns.
- As, it will provide the short information of your account.
- To help Account Holder- Account Holders can see their balance in their account.
- To Help User-Here is a help menu that can help account holder to manage his account by using ATM machine.

### 1.2 Operation Environment

In computer software, an operating environment or integrated applications environment is the environment in which users run application software. The environment of a user interface is provided by an application manager and usually an application programming interface (API) to the application manager. We used Code Blocks for our development.

### 1.3 Development Environment:

This below table will show the configuration of the development environment used to create this ATM.

Device	- Dell Latitude E7440
Processor	- Intel Core i7
Generation	- 6th
Graphics (GPU)	- Intel 4GB
Operating System (OS)	- Windows 10
Memory (RAM)	- 8 GB (DDR3 by Samsung)
Storage (ROM)	- 512GB (SSD)
IDE (Coding Software)	- Code Blocks (Version 1.1, Build 20.03)
Coding Language	- C++
Compiler (for Code)	- GNU, GCC
Key Board	- Astrum Multimedia keyboard (Gaming Edition)
Mouse	- T WOLF (Gaming Edition)

## **CHAPTER 2:**

## **SYSTEM ANALYSIS**

### **2.1 System Requirement and Specification**

In order to run this software, we are going to need a GNU & GCC compiler.

### **2.2 Existing VS Proposal**

The proposed system is intended to make life easy. The main purpose of the project is to build software that makes everything easy. It's so simple to use and various important task like add books and managing library.

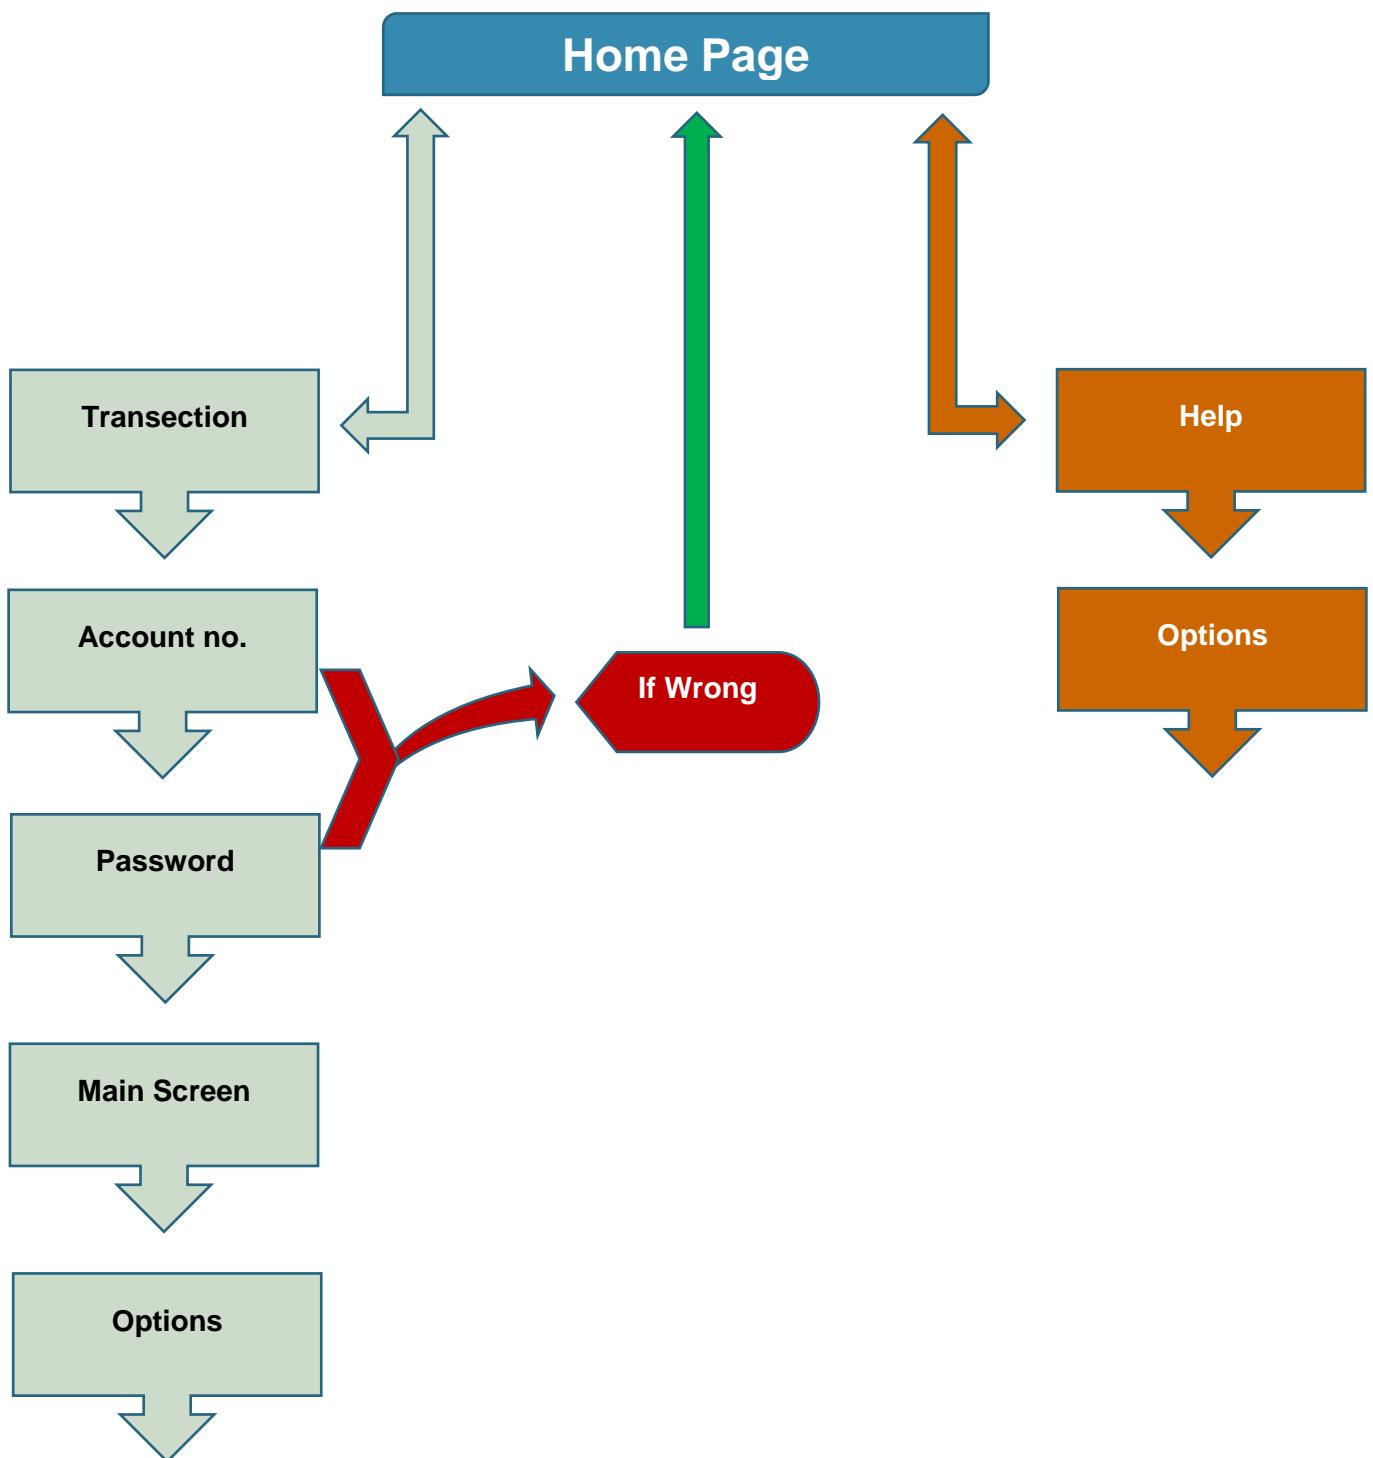

### **2.3 Software Tool Used**

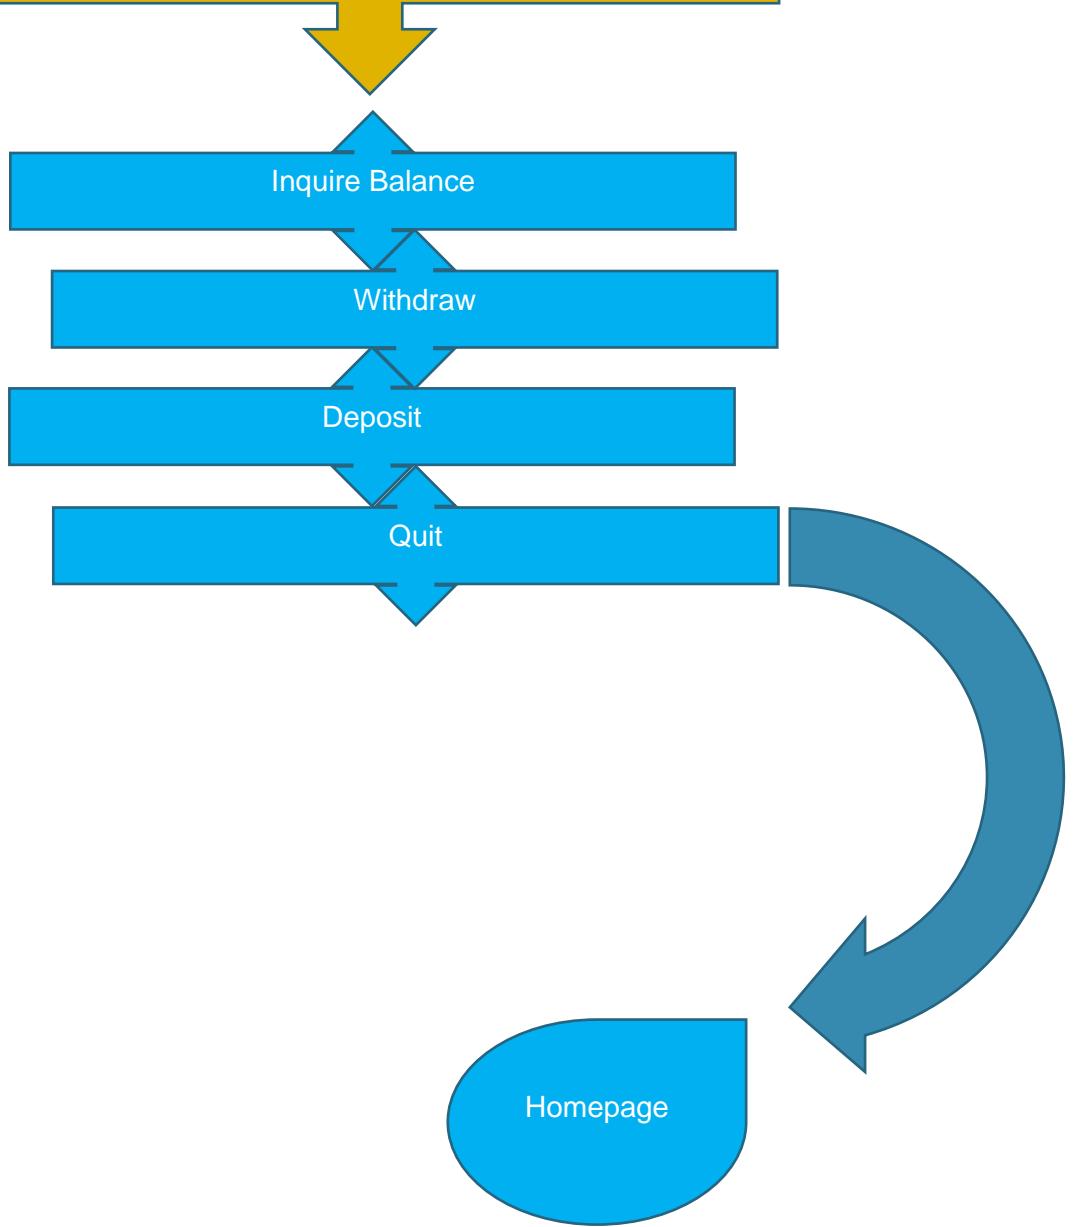

Code Editor - Code Blocks.

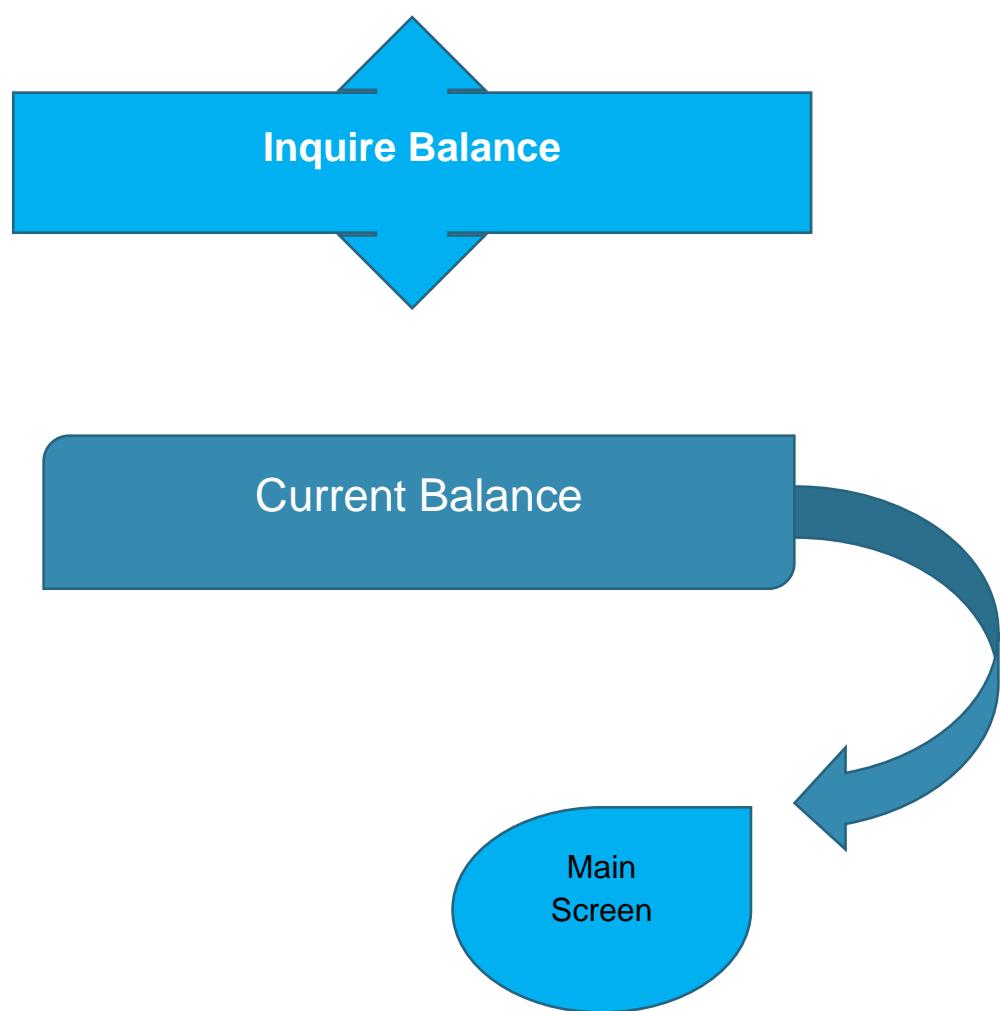

Programming language - C++.

Compiler - GCC compiler 6.3.0

Help?(4)

## HELP

4

Help?(4)

1. It shows my password is wrong.
2. I think my account has been hacked.
3. The money has been deducted from my account but the machine has not given the money yet.
4. For more information Please contact with us:

## Option 1

1

If your password is showing wrong then please recheck the password and enter it again correctly. Please note that entering the password more than 3 times may invalidate your card. If the password is incorrect even after entering it correctly, please contact the nearest branch, thank you.

## Option 2

2

How to understand that the account has been hacked?

2. If you don't have the desired amount in the account.
3. If you notice any changes in the account.

Tips : Of course, for the security of your account, never share your PIN, password, or sensitive account information.

## Option 3

3

We are very sorry for your trouble. It may be due to a system error. Please contact our branch as soon as possible. Before contacting, please keep the necessary documents and your mobile message along with your account information. Thank you.

## Option 4

Chapter : 4

Conclusion

### Conclusion & Future Work:

In this project, the objective concerned only to improvise a method where customer can perform an ATM loss card report through the ATM machine. The Automated Teller Machine Reporting system application is to help the user who has problems reporting the loss of ATM card. The implementation will ensure that the system can bring benefits especially to the customers in this evolving era of technologies. This project has introduced a new prototype for ATM reporting system and make the ATM machine usable and acceptable. In this system, there are more objectives that could possibly be implemented in future work such as implementing a higher level of security to avoid customers from being scam or fall into the phishing Trap.
